

CSIE30600/CSIEB0290
Database Systems

**Lecture 1:
Introduction**

Outline

- Data is ubiquitous
- Basic Definitions
- Types of Databases and Database Applications
- Typical DBMS Functionalities
- Example of a Database (UNIVERSITY)
- Main Characteristics of the Database Approach
- Database Users
- Advantages of Using the Database Approach
- History of Database Systems
- Extending Database Capabilities
- When Not to Use Databases

Data & Technological Advances

- Five classes of technological advances are changing our relationship with data:
- More **storage space**
 - allows us to keep more data
- Faster **processor (and memory) speeds**
 - allows us to access and process more data
- Better **networking**
 - allows us to share data more efficiently
- Different **“sensors”**
 - allows us to access new kinds of data
- Better **processing methods** (AI & machine learning)
 - allows us to process data more intelligently

CSIE30600/CSIEB0290 Database Systems

Introduction 3

HDD Areal Density Growth

CSIE30600/CSIEB0290 Database Systems

Introduction 4

HDD Cost (Historical)

Hard drive cost per GB over time

date	capacity	cost	\$/GB
1957	3.75 MB	\$34,500	\$9.2 million/GB
1989	40 MB	\$1,200	\$30,000/GB
1995	1 GB	\$850	\$850/GB
2004	250 GB	\$250	\$1/GB
2011	2 TB	\$70	\$0.035/GB
2018	4 TB	\$75	\$0.019/GB

HDD Price per TB

3.5" internal drives (Last updated: 12 September 2020)

Price per TB	Price	Size	Drive
\$19.37	\$154.99	8TB	Seagate BarraCuda ST8000DM004 8TB 5400 RPM 256MB Cache SATA 6.0Gb/s 3.5" Internal Hard Drive Bare Drive
\$21.25	\$84.99	4TB	WD Blue 4TB Desktop Hard Disk Drive - 5400 RPM SATA 6Gb/s 64MB Cache 3.5 Inch - WD40EZRX
\$21.50	\$214.99	10TB	Seagate Exos Enterprise Capacity 3.5 ST10000NM0086 10TB 7200 RPM 256MB Cache SATA 6.0Gb/s 3.5" Hard Drives Bare Drive
\$22.14	\$309.99	14TB	Seagate Exos X14 14TB 7200 RPM 512e/4Kn SATA 6Gb/s 256MB Cache 3.5-Inch Enterprise Hard Drive (ST14000NM0018)
\$22.33	\$267.94	12TB	Seagate Exos 12TB Enterprise HDD SATA 6Gb/s 512e/4Kn 7200 RPM 256MB Cache 3.5" Internal Hard Drive ST12000NM001G - OEM
\$22.50	\$89.99	4TB	Seagate BarraCuda ST4000DM004 4TB 5400 RPM 256MB Cache SATA 6.0Gb/s 3.5" Hard Drives Bare Drive - OEM
\$22.50	\$179.99	8TB	TOSHIBA X300 HDWR180XZSTA 8TB 7200 RPM 256MB Cache SATA 6.0Gb/s 3.5" Internal Hard Drive
\$22.71	\$317.99	14TB	Toshiba MG07SCA 14TB Internal Hard Drive 3.5inch - MG07SCA14TE
\$23.27	\$372.27	16TB	Seagate Exos 16TB Enterprise HDD X16 SATA 6Gb/s 512e/4Kn 7200 RPM 256MB Cache 3.5" Internal Hard Drive ST16000NM001G
\$23.33	\$139.99	6TB	WD Blue 6TB Desktop Hard Disk Drive - 5400 RPM SATA 6Gb/s 256MB Cache 3.5 Inch - WD60EZAZ
\$23.64	\$330.99	14TB	Toshiba 14TB Enterprise HDD 7200 RPM 512e SATA 6.0Gb/s 256MB Cache 3.5inch - MG07ACA14TE
\$23.75	\$94.99	4TB	WD Purple 4TB Surveillance Hard Disk Drive - 5400 RPM Class SATA 6Gb/s 64MB Cache 3.5 Inch WD40PURZ
\$24.00	\$143.99	6TB	Seagate BarraCuda ST6000DM003 6TB 5400 RPM 256MB Cache SATA 6.0Gb/s 3.5" Internal Hard Drive Bare Drive
\$24.00	\$287.99	12TB	Toshiba Enterprise Capacity MG07ACxxx Series MG07ACA12TE - Hard drive - 12 TB - internal - 3.5" - SATA 6Gb/s - NL - 720

CSIE30600/CSIEB0290 Database Systems

Introduction 8

New Data from Sensor Web

- All sensors reporting position
 - All connected to the web
 - All with metadata registered
 - All readable remotely
 - Some controllable remotely

CSIE30600/CSIEB0290 Database Systems Introduction 11

Data Everywhere

- Airline flight management system
- Financial data
- Commercial store (eg, WalMart) data
- Department of Motor Vehicles
- Surveillance video
- University student records
- Baseball results
- Web sites
- Medical records
- ...

CSIE30600/CSIEB0290 Database Systems Introduction 12

Need Effective Data Management

- Effective management can make an organization's data a valuable **asset**(資產).
- Ineffective policies can make an organization's data a **liability**(負債).
- **Big data analytics** is becoming the **gold mine** of the 21st century.
- The paradigm has been extended from **database systems** to **data science**.

Basic Concepts

- **Data**: Known facts that can be recorded and have an implicit meaning.
- **Database**: Collection of interrelated data
- **Mini-World** or **Universe of Discourse (UoD)**: Some part of the real world about which data is stored in a database.
- **Database Management System (DBMS)**: A collection of programs to facilitate the creation and maintenance of a database.
- **Database System** = DBMS + Database
- A database system contains **information** about a particular **enterprise**.
- A database system provides an **environment** that is both **convenient** and **efficient** to use.

Database Management System (DBMS)

- DBMS is:
 - A collection of software programs
 - General purpose
- DBMS enables users to:
 - **Define** DB
 - **Construct** DB
 - **Change** (or **update**) DB
 - **Query** the data in DB
 - **Share** DB
- DBMS maintains the **integrity** of DB

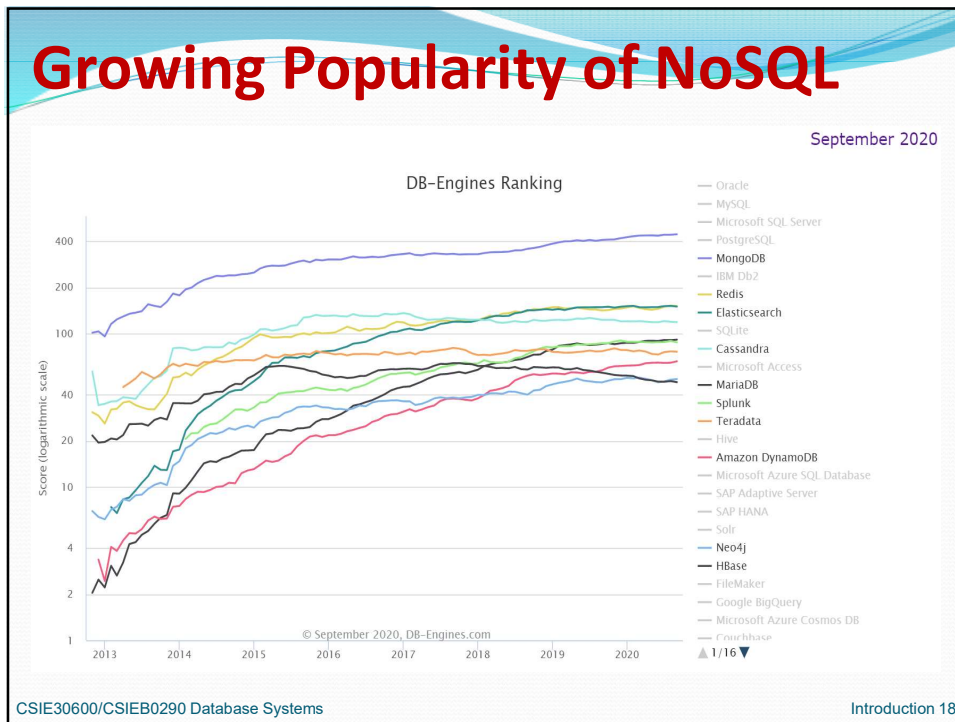

DBMS Popularity Ranking

358 systems in ranking, September 2020

Rank			DBMS	Database Model	Score		
Sep 2020	Aug 2020	Sep 2019			Sep 2020	Aug 2020	Sep 2019
1.	1.	1.	Oracle +	Relational, Multi-model f	1369.36	+14.21	+22.71
2.	2.	2.	MySQL +	Relational, Multi-model f	1264.25	+2.67	-14.83
3.	3.	3.	Microsoft SQL Server +	Relational, Multi-model f	1062.76	-13.12	-22.30
4.	4.	4.	PostgreSQL +	Relational, Multi-model f	542.29	+5.52	+60.04
5.	5.	5.	MongoDB +	Document, Multi-model f	446.48	+2.92	+36.42
6.	6.	6.	IBM Db2 +	Relational, Multi-model f	161.24	-1.21	-10.32
7.	7.	↑ 8.	Redis +	Key-value, Multi-model f	151.86	-1.02	+9.95
8.	8.	↓ 7.	Elasticsearch +	Search engine, Multi-model f	150.50	-1.82	+1.23
9.	9.	↑ 11.	SQLite +	Relational	126.68	-0.14	+3.31
10.	↑ 11.	10.	Cassandra +	Wide column	119.18	-0.66	-4.22
11.	↓ 10.	↓ 9.	Microsoft Access	Relational	118.45	-1.41	-14.26
12.	12.	↑ 13.	MariaDB +	Relational, Multi-model f	91.61	+0.69	+5.54
13.	13.	↓ 12.	Splunk	Search engine	87.90	-2.01	+0.89

15.	15.	↓ 14.	Hive	Relational	71.17	-4.12	-11.93
16.	16.	↑ 18.	Amazon DynamoDB +	Multi-model f	66.18	+1.43	+8.36
17.	17.	↑ 25.	Microsoft Azure SQL Database	Relational, Multi-model f	60.45	+3.60	+32.91
18.	18.	↑ 19.	SAP Adaptive Server	Relational	54.01	+0.05	-2.09
19.	19.	↑ 21.	SAP HANA +	Relational, Multi-model f	52.86	-0.26	-2.53
20.	20.	↓ 16.	Solr	Search engine	51.62	-0.08	-7.35

<http://db-engines.com/en/ranking/relational+dbms>

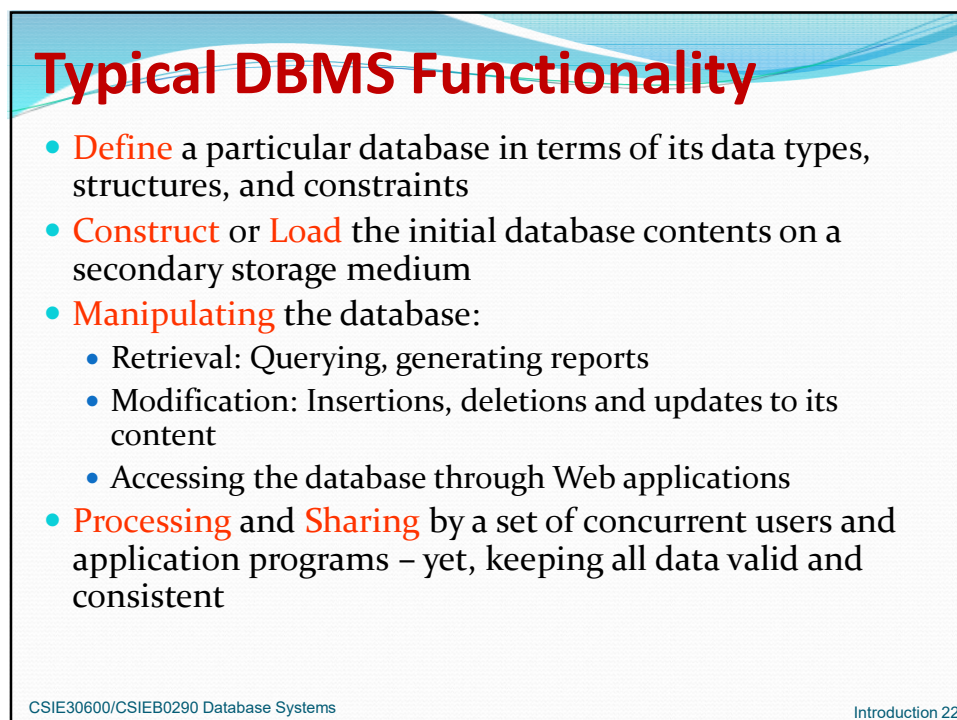

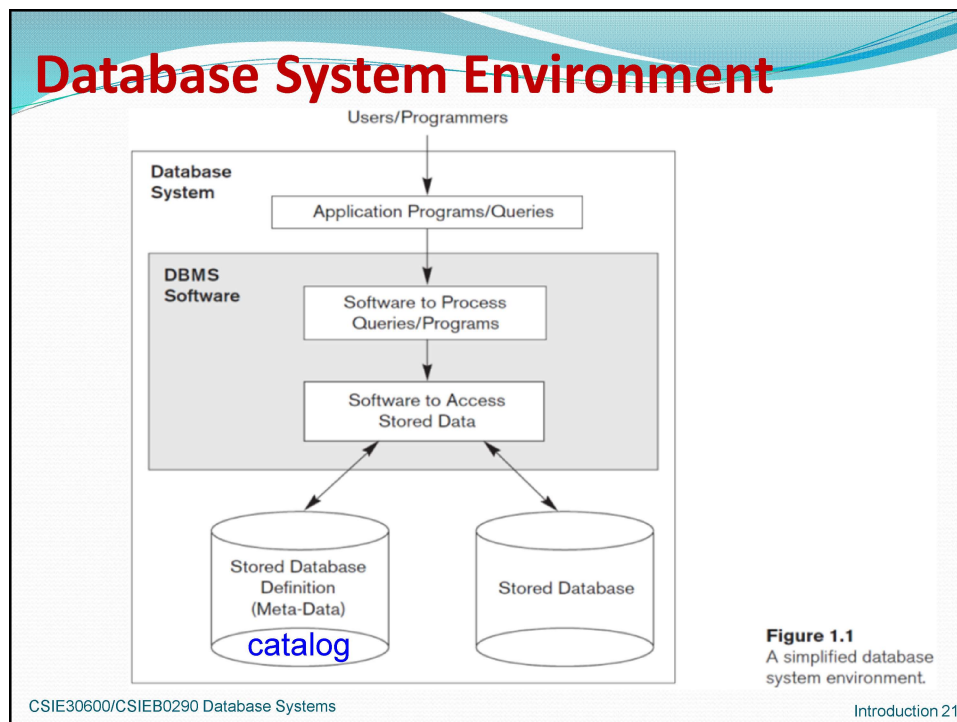

Main Goals of DB Course

- To understand how to **use** a DBMS
 - How to design and create DB, data models, SQL, ...
- To understand how a DBMS **works**
 - Physical properties of disks and files, software to manage reading and writing to disk, implementation of algorithms to answer user queries, ...

Types of Databases and Applications

- Traditional Applications:
 - **Numeric** and **Textual** Databases
- More Recent Applications:
 - Multimedia Databases (images, audio, video, ...)
 - Geographic Information Systems (GIS)
 - Data Warehouses
 - Real-time and Active Databases
 - Many other applications
- New Trends: big data analytics, IoT
- First part: focuses on **traditional applications**
- *A number of recent applications are described later in the class and book.*

Typical DBMS Functionality

- Other features:
 - **Protection** or **Security** measures to prevent unauthorized access
 - “Actively” take **internal actions** on data
 - **Presentation** and **Visualization** of data
 - **Maintaining** the database and associated programs over the lifetime of the database application
 - Called database, software, and system maintenance

Application Activities Against a DB

- Applications interact with a database by generating
 - **Queries**: that access different parts of data and formulate the result of a request
 - **Transactions**: that may read some data and “update” certain values or generate new data and store that in the database
- Applications must not allow unauthorized users to access data
- Applications must keep up with changing user requirements against the database

Database Applications

- **Banking:** all transactions
- **Airlines:** reservations, schedules
- **Universities:** registration, grades
- **Sales:** customers, products, purchases
- **Online retailers:** order tracking, customized recommendations
- **Manufacturing:** production, inventory, orders, supply chain
- **Human resources:** employee records, salaries, tax deductions
- **Databases touch all aspects of our lives**

Purpose of Database Systems

- In the early days, database applications were built directly on top of **file systems**
- Drawbacks of using file systems :
 - **Data redundancy** and **inconsistency**
 - Multiple file formats, duplication in different files
 - **Difficulty in accessing** data
 - Need to write a new program for each new task
 - **Data isolation** — multiple files and formats
 - **Integrity** problems
 - Integrity constraints (e.g. account balance > 0) become “buried” in program code rather than being stated explicitly
 - Hard to add new constraints or change existing ones

Purpose of Database Systems

- Drawbacks of using file systems (cont.)
 - **Atomicity** of updates
 - Failures may leave database in an inconsistent state
 - Example: Transfer of funds from one account to another
 - **Concurrent access** by multiple users
 - Concurrent accessed needed for performance
 - Uncontrolled concurrent accesses can lead to inconsistencies
 - Example: Two people reading and updating at the same time
 - **Security problems**
 - Hard to provide user access to some, but not all, data
- Database systems offer solutions to **ALL** the above problems

CSIE30600/CSIEB0290 Database Systems

Introduction 27

Example of a Database

- **Mini-world for the example:**
 - Part of a UNIVERSITY environment.
- **Some mini-world *entities*:**
 - STUDENTs
 - COURSEs
 - SECTIONs (of COURSEs)
 - DEPARTMENTs
 - INSTRUCTORs

CSIE30600/CSIEB0290 Database Systems

Introduction 28

Example of a Database

- Some mini-world *relationships*:
 - SECTIONs are of specific COURSEs
 - STUDENTs take SECTIONs
 - COURSEs have prerequisite COURSEs
 - INSTRUCTORs teach SECTIONs
 - COURSEs are offered by DEPARTMENTs
 - STUDENTs major in DEPARTMENTs
- Note: The above entities and relationships are typically expressed in a **conceptual data model**, such as the **ENTITY-RELATIONSHIP** data model (to be discussed later in class)

CS3380	MATH2410
CS3320	CS1310

CSIE30600/CSIEB0290 Database Systems

Introduction 30

Main Characteristics

- **Self-describing:** A **DBMS catalog (meta-data)** stores the description of the database. (next slide)
- **Program-data Independence:** Allows changing storage structures w/o changing DBMS access programs.
- **Data abstraction:** **Data models** hide storage details and present the users with a **conceptual view** of the DB.
- **Multiple views:** Each user may see a different view of the database.
- **Data sharing:** among multiple users
- **Transactions, concurrent access , recovery , OLTP**

A Simplified Database Catalog

RELATIONS

Relation_name	No_of_columns
STUDENT	4
COURSE	4
SECTION	5
GRADE_REPORT	3
PREREQUISITE	2

COLUMNS

Column_name	Data_type	Belongs_to_relation
Name	Character (30)	STUDENT
Student_number	Character (4)	STUDENT
Class	Integer (1)	STUDENT
Major	Major_type	STUDENT
Course_name	Character (10)	COURSE
Course_number	XXXXNNNN	COURSE
....
....
....
Prerequisite_number	XXXXNNNN	PREREQUISITE

Note: Major_type is defined as an enumerated type with all known majors.
 XXXXNNNN is used to define a type with four alphabetic characters followed by four numeric digits.

Figure 1.3

An example of a database catalog for the database in Figure 1.2.

Database Users

- Users may be divided into
 - Those who actually use and control the database content, and those who design, develop and maintain database applications (called “**Actors on the Scene**”), and
 - Those who design and develop the DBMS software and related tools, and the computer systems operators (called “**Workers Behind the Scene**”).

Database Users

- Actors on the scene
 - **Database administrators:**
 - Responsible for authorizing access to the database, for coordinating and monitoring its use, acquiring software and hardware resources, controlling its use and monitoring efficiency of operations.
 - **Database Designers:**
 - Responsible to define the content, the structure, the constraints, and functions or transactions against the database. They must communicate with the end-users and understand their needs.

Database Administrator

- Coordinates all the activities of the database system; must have a good understanding of the enterprise's information resources and needs.
- Database administrator's duties:
 - Schema definition
 - Storage structure and access method definition
 - Schema and physical organization modification
 - Granting user authority to access the database
 - Specifying integrity constraints
 - Acting as liaison with users
 - Monitoring performance and responding to changes in requirements

End-users

- Actors on the scene (continued)
 - **End-users**: use the data for queries, reports and some of them update the database content.
- End-users can be categorized into:
 - **Casual**: access db occasionally when needed
 - **Naïve** or **Parametric**: they make up a large section of the end-user population.
 - They use previously well-defined functions in the form of "**canned transactions**" against the database.
 - Examples are bank-tellers or reservation clerks who do this activity for an entire shift of operations.

End-users (cont.)

- **Sophisticated:**
 - Business analysts, scientists, engineers, others thoroughly familiar with the system capabilities.
 - Many use tools in the form of **software packages** that work closely with the stored database.
- **Stand-alone:**
 - Mostly maintain personal databases using ready-to-use packaged applications.
 - An example is a tax program user that creates its own internal database.
 - Another example is a user that maintains an address book

CSIE30600/CSIEB0290 Database Systems

Introduction 37

System Analysts and Application Programmers

- **System analysts:** Analyze problem, determine the requirements of the users, develop specifications.
- **Application programmers:** Design and implement specification, testing, debugging, maintaining softwares. Also known as **software developers** or **software engineers**.
- **Business analysts:** There is an increasing need for people who can analyze vast amounts of business data and real-time data (“Big Data”) for better decision making, planning, advertising, marketing etc.

CSIE30600/CSIEB0290 Database Systems

Introduction 38

Users behind the Scene

- **DB designers** – design the database systems for end users
- **DBMS designers** – design database management systems and tools for building databases
- **Tool designers** – Design and implement tools that facilitate building of applications and allow using database effectively (eg. modeling and designing databases, performance monitoring, prototyping, test data generation, user interface creation, simulation etc.)
- **Operators and maintenance personnel.**

CSIE30600/CSIEB0290 Database Systems

Introduction 39

Advantages of Using the Database Approach

- **Controlling redundancy** in data storage and in development and maintenance efforts.
 - Sharing of data among multiple users.
- **Restricting unauthorized access** to data.
- Providing **persistent storage** for program objects
 - In object-oriented DBMS
- Providing **storage structures** (e.g. **indexes**) efficient data access
- Provide **optimization of queries** for efficient processing

CSIE30600/CSIEB0290 Database Systems

Introduction 40

Advantages of Using the Database Approach (cont.)

- Providing **backup** and **recovery** services.
- Providing **multiple interfaces** to different classes of users.
- Representing **complex relationships among data**.
- Enforcing **integrity constraints** on the database.
- Drawing **inferences and actions** from the stored data using deductive and active rules

Additional Implications

- Potential for **enforcing standards**:
 - This is very crucial for the success of database applications in large organizations. **Standards** refer to data item names, display formats, screens, report structures, meta-data (description of data), Web page layouts, etc.
- **Reduced application development time**:
 - Incremental time to add each new application is reduced.

Additional Implications (cont.)

- **Flexibility** to change data structures:
 - Database structure may evolve as new requirements are defined.
- **Availability** of current information:
 - Extremely important for on-line transaction systems such as airline, hotel, car reservations.
- **Economies of scale**:
 - Wasteful overlap of resources and personnel can be avoided by consolidating data and applications across departments.

History of Database Systems

- **Pre-1960s**
 - File processing systems
 - Redundancy and inconsistency between files
 - Incompatibility between access programs
 - Data isolation
 - Concurrent access anomalies
 - Security and integrity problems

DB History (cont.)

- **The '60s**

- **Carles Bachman** designed the 1st DBMS Integrated Data Store (and received the 1st Turing Award in 1973)
- **Three-level architecture** (more about this in next lecture)
- CODASYL, DBTG, and the **network model**
- **Hierarchical model** and the IMS system

DB History (cont.)

- **The '70s**

- **Edgar Codd** (1970): The **Relational model** (Codd won the 1981 Turing Award)
- Provide a sound theoretical base.
- 1975, 1st ACM SIGMOD international conference
- 1975, 1st VLDB international conference
- **Peter Chen 陳品山** (1976): The **Entity-relationship model**
- **System R** (IBM), **INGRES** (UC-Berkely), **System 2000** (UT-Austin)
- **SQL, QUEL**

DB History (cont.)

- **The '80s**

- **Commercial** relational DBMS
(DB₂, ORACLE, SYBASE, INFORMIX, ...)
- DBMS on **PC's**
(DBASE, PARADOX, ...)
- **Transaction management** (James Gray won the 1999 Turing Award)
- **Standards** (SQL standardized in the late 1980s)

DB History (cont.)

- **The '90s**

- **New applications** (Web, CAD/CAM, CASE, office automation, science and engineering, VLSI, ...)
- Demand for **new DBMS technologies**
- Object-oriented DBs, Parallel/Distributed DBs, Active/Deductive DBs, Multimedia DBs, Mobile DBs, Temporal/Real-time DBs, Spatial DBs (such as GIS), ...
- The emergence of **ERP** (Enterprise Resource Planning) and **MRP** (Material Requirements Planning) packages
- **Data Warehousing** and **data mining**
- DBMS in the **Internet/Web** and **E-commerce** applications

DB History (cont.)

- **The 2000s and beyond**
 - XML, XQuery and the Semantic Web
 - **Data Stream Management Systems (DSMS)**
 - Sensor databases, IoT data management
 - Network traffic analysis
 - RFID data management
 - ...
 - **Mobile Data Management (MDM)**
 - **Cloud Databases**
 - **AIDB, MLDB (DB + AI&ML)**

CSIE30600/CSIEB0290 Database Systems

Introduction 49

New Trend

- First decade of the 21st century has seen **tremendous growth** in **user generated data** and **automatically collected data** from applications and search engines.
- **Social Media** platforms such as Facebook and Twitter are generating millions of transactions a day and businesses are interested to tap into this data to “understand” the users.
- **Cloud Storage** and **Backup** is making unlimited amount of storage available to users and applications

CSIE30600/CSIEB0290 Database Systems

Introduction 50

Big Data, NoSQL & NewSQL

- New data storage, management and analysis technology was necessary to deal with the huge volume of data in petabytes a day (10^{15} bytes or 1000 terabytes) in some applications – “**Big Data**”.
- **Hadoop** and **MapReduce** approach to distributed data as well as the **Google File System** have given rise to Big Data technologies. Further enhancements are taking place in the form of **Spark** based technology.
- **NoSQL** (**Not only SQL**) and **NewSQL** systems have been designed for rapid search and retrieval from documents, processing of huge graphs, and other forms of data with flexible models of transaction processing.
- **True value of data** can now be revealed !!

CSIE30600/CSIEB0290 Database Systems

Introduction 51

When NOT to Use a DBMS

- Main **inhibitors** (**costs**) of using a DBMS:
 - High initial investment and possible need for additional hardware. (Better with cloud)
 - The generality that a DBMS provides for defining and processing data
 - Overhead for providing security, concurrency control, recovery, and integrity functions.
- When a DBMS may be **unnecessary**:
 - If the database and applications are simple, well defined, and not expected to change.
 - If access to data by multiple users is not required.

CSIE30600/CSIEB0290 Database Systems

Introduction 52

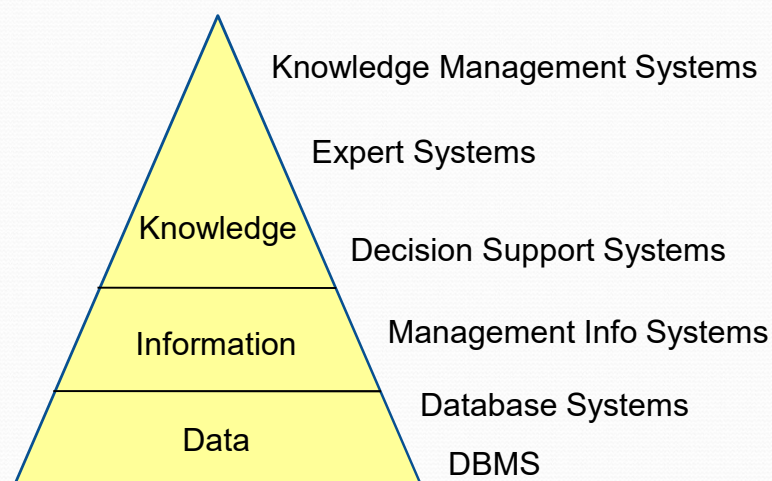

When NOT to use a DBMS

- When a DBMS may be **infeasible**:
 - In embedded systems where a general purpose DBMS may not fit in available storage
- When **no** DBMS may **suffice**:
 - If there are hard real-time requirements that may not be met because of DBMS overhead
 - If the database system is not able to handle the complexity of data because of modeling limitations
 - If the database users need special operations not supported by the DBMS
